Collect Employee Details one at a time

Launch Browser on Chrome Web Application to a specified URL: Autocomplete the Employee Detail Form using information from the Input Dialog box , accept the terms and conditions, and submit the form to Auto-generate the Employee ID and Employee Email Address.

System

Launch NotePad Application and type the Auto-Generated Employee ID and Email address values. Save the File as Employee_Details and close the Notepad.

System

END

Input Dialog Box for Employee Details stored as Variables

Using Use Application/Brower Activity: Launch chrome Browser using the URL : https://excelcult.com/hr-on-boarding-process-form/

System

Using the type into Activity: Read each variable content from input dialog box and type Into the Form respective fields based on the anchors on chrome: https://excelcult.com/hr-on-boarding-process-form/

System

Using the IF activity: define a condition to determine the option button for the Gender selection as either Male or Female.

Male — Female

Complete the form by gender selection and accepting the terms and conditions and submitting it to generate the Employee ID and email address

System

Using Get text Activity, create two more Variables for the Employee ID and email Address

System

Using App/Web recorder: Launch NOTE PAD APPLICATION

System

Type Into the Notepad Application the information stored on the two Variables created on Get text Activity.

System

Using Click Activity, Click on file and save the document as Employee_Details and Save and closed the Notepad Application.

System
